Reiker Enters. v. Fan Brace, Inc.

99-1428

UNITED STATES COURT OF APPEALS FOR THE FEDERAL CIRCUIT

2000 U.S. App. LEXIS 20881

August 16, 2000, Decided

NOTICE: [*1] RULES OF THE FEDERAL CIRCUIT COURT OF APPEALS MAY LIMIT CITATION TO UNPUBLISHED OPINIONS. PLEASE REFER TO THE RULES OF THE UNITED STATES COURT OF APPEALS FOR THIS CIRCUIT.

SUBSEQUENT HISTORY: Reported in Table Case Format at: <=1> 2000 U.S. App. LEXIS 37493.

DISPOSITION: Affirmed.

CASE SUMMARY

PROCEDURAL POSTURE: Plaintiff appealed the judgment of the United States District Court for the Northern District of Georgia which entered judgment in favor of defendants upon a jury verdict finding no patent infringement, and denied plaintiff's motions for judgment as a matter of law and for a new trial, alleging that the trial court improperly construed plaintiff's patent claim for its heavy-duty, expansible junction box hanger.

OVERVIEW: Plaintiff alleged that defendants infringed plaintiff's patent for a heavy-duty, expansible junction box hanger, and defendant asserted that the significant difference in the support structures precluded a finding of infringement. The court held that no functional identity existed in defendant's device since the support structures of defendant's device were not capable of supporting the interconnecting brace means without physically contacting the end

supporting the interconnecting brace means without physically contacting the end portions. Requiring that the brace means be clear of the end portions constituted a functional limitation of the claimed support means and, in view of such claim construction, plaintiff failed to show that the jury's finding that defendant's device was not capable of functioning in the same manner as plaintiff's device was unsupported by substantial evidence. In the absence of such functional identity, there was no infringement.

OUTCOME: Judgment was affirmed; the trial court properly construed plaintiff's patent claim concerning its support structure to constitute a functional limitation, and the jury's subsequent finding of a lack of functional identity between plaintiff's and defendants' devices thus precluded a finding of infringement.

CORE TERMS: hanger, non-removed, brace, ceiling, feet, installed, patent, assembly, junction box, light-weight ...
